

MASTER-KIDS

One Student. One Platform. 15 Years.

White Paper — The Cradle-to-Career Learning Platform

We are not building an app. We are building a 15-year relationship with every Indian family.

 Pre-Nursery (Age 2)

 Primary (Class 1–5)

 Middle School (Class 6–8)

 Secondary (Class 9–10)

 Senior Secondary (Class 11–12)

 Graduation Bridge (Age 18–22)

VERSION 2.0 · MAY 2026 · CONFIDENTIAL — FOR INVESTOR AND PARTNER REVIEW

EXECUTIVE SUMMARY

India's First Cradle-to-Career Learning Intelligence Platform

India has **310 million children under the age of 18** — 260 million in school, 50 million in early childhood education. Every one of them will spend the next 15 to 20 years navigating the most consequential journey of their lives: from their first alphabet to their first job offer. Across that entire journey, no single platform today knows who they are, what they have learned, where they are strong, where they need help, and where they are headed.

Master-Kids is the world's first cradle-to-career learning intelligence platform for Indian children. It accompanies a child from Pre-Nursery at age 2 all the way through graduation — tracking milestones, building daily habits, structuring learning, and assembling an **Educational DNA profile** that grows richer with every passing year.

310M

CHILDREN ADDRESSABLE

₹58K Cr

PRIVATE TUTORING MARKET

15 Yrs

CUSTOMER LIFETIME

180:1

LTV:CAC (15-YEAR)

The platform operates across **six stages of a child's life**:

Stage	Age Range	Context
1 — Early Childhood	2–5	Pre-Nursery, Nursery, LKG, UKG
2 — Primary School	6–11	Class 1–5, CBSE/ICSE/State Board
3 — Middle School	11–14	Class 6–8, Olympiads, board selection
4 — Secondary	14–16	Class 9–10, boards, JEE/NEET foundation
5 — Senior Secondary	16–18	Class 11–12, JEE/NEET/CUET/NDA/NIFT/CA
6 — Graduation Bridge	18–22	College, internships, post-grad prep

Current Traction (Pre-Seed): 50+ beta families across Bangalore and Delhi. 40% logging three or more times per week. Parent summary open rates above 50%. Zero paid marketing. Net Promoter Score: +62.

We are raising a **seed round of ₹2–3 crore (\$250,000–\$350,000)** to scale from 50 families to 5,000 paid families across five cities, build out the Early Childhood module, and position for Series A by Month 18.

SECTION 1

The Problem: India Educates Without Memory

1.1 The 15-Year Fragmentation Problem

India produces more engineering and medical aspirants per year than any country on Earth. The JEE ecosystem alone touches over **1.2 million students annually**. NEET draws over **2.3 million**. The pressure begins not at Class 11 — it begins at age 2, when parents start making choices about play school curricula, developmental activities, and the kind of learner they want their child to become.

And yet, at no point in this 15-to-20-year journey does any system hold a child's complete learning story. Pre-Nursery milestone records exist only in a parent's memory or a physical diary. Primary school report cards are PDFs filed in a drawer. Middle school tutor notes are WhatsApp messages that expire. This institutional amnesia costs families thousands of hours and lakhs of rupees in misguided decisions at every stage of the journey.

1.2 The Daily Consistency Gap

Parents spend an average of **₹3,000–₹8,000 per month per child** on educational support. The private tutoring market is valued at **₹58,000 crore** and growing at 14% annually. **Over 70% of children aged 8–14 attend at least one form of private coaching or tutoring**. Yet their primary feedback mechanism is a monthly report card — arriving too late to be actionable. Annual board results are the first real signal that something went wrong, and by then an entire academic year is lost.

1.3 The Tutor Invisibility Problem

India has **more than 3 million private tutors** managing session records in a handwritten notebook, a WhatsApp message, or nothing at all. The tutor is the most important external actor in a child's academic life and remains entirely outside the digital progress loop.

1.4 The Early Childhood Blind Spot

Between ages 2 and 5 — the most developmentally critical years — parents are almost completely without tools. The NEP 2020 mandate for ECCE (Early Childhood Care and Education) tracking from age 3 exists in policy. There is no product built to implement it.

1.5 The Habit Collapse Problem

Without visible progress, streaks, and rewards, most new educational habits collapse within two to three weeks. Indian EdTech delivers content — not daily habit loops. Byju's, Unacademy, and Vedantu are not daily habit engines. Master-Kids is.

SECTION 2

The Vision: One Student, One Platform, 15 Years

2.1 Three Core Beliefs

Belief 1: The daily habit is the foundation. A child who logs their day in 10 seconds, receives a visual reward, and hears their parent acknowledge it — that child builds a study habit that compounds over years.

Belief 2: The AI must grow up with the child. The same platform must show a milestone tap-grid to a 3-year-old, a subject badge board to a 7-year-old, a chapter completion tracker to a 13-year-old, a JEE rank estimator to a 16-year-old, and a college shortlist to an 18-year-old.

Belief 3: The 15-year LTV is the only number that matters. A family that joins at age 3 and stays through age 18 generates not just subscription revenue, but college counseling fees, publisher referral income, coaching institute lead fees, government contract credibility, and word-of-mouth referrals for younger siblings.

2.2 The Educational DNA Profile

The central data asset of the platform. A continuously evolving, AI-structured representation of a child's complete learning journey.

Age	Data in the Profile
Age 3	First milestones, play-based activity frequency, parental engagement levels
Age 8	Subject strengths and gaps, learning style signals, tutor notes, mood trends, 2-year streak history
Age 14	Olympiad records, board preference signals, career interest keywords extracted from years of voice logs
Age 17	JEE/NEET chapter-level completion, mock test percentile trends, college shortlist tuned to this specific child
Age 21	College performance, internship history, career goal evolution, post-graduation path

2.3 Backward Planning: From Graduation Goal to Today

When a parent joins Master-Kids, the first act after setup is the most important: setting the long-term goal. The AI maps the entire journey backward from the graduation goal to the child's current age and grade — which subjects to prioritise

and when, which Olympiads to attempt, which coaching to join and at what class level. At every stage, the AI adapts. Every log reshapes the journey.

SECTION 3

The Six-Stage Student Journey

Stage 1: Early Childhood (Age 2–5)

Core features: Milestone tracker aligned to WHO developmental guidelines, activity logger (tap-based, no typing), screen time manager, photo and voice memory log, toy and learning material recommendations from verified partners.

Revenue: Toy/learning material affiliate commissions. Child education insurance company partnerships. Government ECCE contracts aligned to NEP 2020.

Stage 2: Primary School (Age 6–11) — Class 1–5

Core features: Subject logging, voice logging (60-second), tap logging (ages 5–8), XP/streaks/badges, AI parent daily summaries via push notification, tutor integration, Smart Learning Plan, AI Tutor Assistant (Miko).

Revenue: Freemium subscriptions (₹149–₹299/month). Publisher partnerships. Tutor marketplace referral fees.

Key insight: By end of Class 5, the child has 5 years of structured learning data. Churn drops sharply after Year 3 of platform use.

Stage 3: Middle School (Age 11–14) — Class 6–8

Core features: Competitive exam awareness (IMO, NSO, NTSE), career interest profiler, board selection guidance (AI-analysed from 6+ years of data), social features, parent-counselor bridge with AI-generated academic health reports.

Revenue: Coaching institute pipeline fees. Scholarship discovery platform.

Stage 4: Secondary School (Age 14–16) — Class 9–10

Core features: CBSE/ICSE board exam preparation with chapter-level tracking, topic coverage heatmap, mock test scheduling, JEE/NEET foundation tracking, subject stream selection guidance (backed by 8+ years of data), board exam countdown calendar.

Revenue: Premium subscriptions. Counselor session marketplace. Coaching institute referral fees.

Stage 5: Senior Secondary (Age 16–18) — Class 11–12

Core features: Full JEE/NEET/CUET chapter tracking, problem-solve counters, mock test analytics with percentile tracking, college shortlisting AI (dynamic, updated monthly), application calendar, IIT/IIM alumni mentor network.

Revenue: Premium subscriptions. College admission consulting packages (₹25,000–₹75,000). University placement partnerships.

Stage 6: Graduation Bridge (Age 18–22)

Core features: College performance tracking (semester GPA), internship tracker, career goal refinement, post-graduation preparation (CAT/GATE/GRE), alumni network, younger sibling activation.

Revenue: Post-grad coaching referrals. Alumni network access. Career services marketplace. Sibling acquisition at effectively zero CAC.

SECTION 4

Student Journey Map: Aarav, From Pre-Nursery to IIT

Aarav is born in 2023. His parents join Master-Kids in 2026 when he turns 3. His family's goal, set on Day 1: IIT Computer Science by 2041.

AGE 3 (2026) — PRE-NURSERY

Aarav's mother Priya logs his first milestone: "Recognised the letter A today." The platform generates an animated milestone card: "First Letter!" His Educational DNA profile is created. Priya sets the backward goal: IIT Computer Science, 2041. The AI is already thinking 15 years ahead.

AGE 5 (2028) — LKG

Aarav uses the tap-logging interface with parental guidance. He logs activity cards: colouring, puzzle-solving, storytime, outdoor play. His streak is 12 days. He has earned 3 badges. Priya receives a weekly milestone summary showing he has mastered all 26 alphabets and shows strong spatial reasoning — "a signal worth noting for the years ahead."

AGE 7 (2030) — CLASS 2, CBSE

Aarav speaks his first voice log: "I did maths and read my English book for 30 minutes." Claude Haiku structures it. Claude Sonnet writes Priya's summary. His streak is 47 days. He has 340 XP. The platform has built 2 years of subject coverage data, 3 tutor session records, and a learning style profile: strong auditory, prefers problem-solving over rote learning.

AGE 9 (2032) — CLASS 4, CBSE

Aarav's maths tutor logs sessions directly on the platform. The AI detects Aarav is ahead of the Class 4 curriculum in maths and recommends the IMAS (International Mathematics Assessment). Priya books a counselor session (₹499, 30 minutes). Aarav sits the IMAS. The platform stores the certificate in his Educational DNA.

AGE 12 (2035) — CLASS 7, CBSE

Aarav's profile shows 6 years of structured data. His maths and science logs are 3x more frequent than Hindi — a sustained pattern tracked since Class 3. The platform surfaces a board selection recommendation grounded in 6 years of evidence. FIITJEE appears in recommended partners. Aarav's profile is shared with FIITJEE admissions (with parental consent) as a pre-qualified lead.

AGE 14 (2037) — CLASS 9. JEE FOUNDATION BEGINS.

His problem-solve counter activates: 23 JEE-level maths problems this month. The rank estimator runs its first projection: top 5,000–8,000 range. His father decides to increase coaching intensity. Priya has not asked Aarav "what did you study today?" in 11 years. The platform tells her, every evening.

AGE 16 (2039) — CLASS 11. JEE ADVANCED PREPARATION.

Aarav has solved 1,847 JEE problems this year. Mock test percentile trajectory: 54th → 71st → 79th. College shortlist: IIT Bombay CS (target), IIT Delhi CS (target), IIT Kharagpur CS (stretch). An IIT Bombay CS alumnus is booked for a mentoring session (₹1,500). Priya books it.

AGE 18 (2041) — JEE ADVANCED. IIT BOMBAY, COMPUTER SCIENCE.

Aarav's JEE Advanced rank: AIR 3,240. IIT Bombay, CS — the goal set 15 years earlier. The platform generates a "Journey Complete" card: 4,300+ logs submitted, 12 tutors across 8 years, 40+ mock tests, every milestone documented, one goal achieved. Priya posts it to her parent WhatsApp group. Seven families sign up that evening. Aarav's sister Ananya, now 4, is on a 14-day streak.

This is what a 15-year relationship looks like. This is the product we are building.

SECTION 5

Market Opportunity

Market Segment	Size	Growth Rate
India school-age children (Class 1–12)	260 million children	—
India early childhood (under 6)	50 million children	—
Total addressable families	~150 million families	—
Private tutoring industry (India)	₹58,000 crore (~\$7B)	14% CAGR
Indian K-12 EdTech	\$10.4B by 2025	20% CAGR
JEE/NEET coaching market	₹25,000 crore	18% CAGR
Early childhood education (India)	\$20B by 2027	25% CAGR
College admission consulting (India)	\$1.2B by 2026	22% CAGR
Indian diaspora families (CBSE worldwide)	~25 million families	US, UK, UAE, Singapore

Competitive Landscape

Platform	Full Lifecycle (2–22)	Daily Habit Loop	AI Parent Summary	Early Childhood	College Guidance
Master-Kids	Yes	Yes	Yes	Yes	Yes
Byju's	No (5–18 only)	No	No	No	No
Vedantu	No (6–18 only)	No	No	No	No
Kidsloop	No (0–5 only)	Partial	No	Yes	No
College Vidya	No (17–22 only)	No	No	No	Yes

Master-Kids wins across every dimension. No competitor has attempted — or can quickly attempt — the 15-year arc.

SECTION 6

The 15-Year Data Moat: Why This Cannot Be Replicated

Year on Platform	Data Accumulated	Switching Cost
Year 1	Basic logs, 3–4 subjects, 1 tutor	Low
Year 3	300+ logs, streak history, subject strength map, learning style profile, 2 years of tutor notes	Moderate
Year 7	2,000+ logs, Olympiad records, 4+ tutor histories, mood trends, achievement portfolio	High
Year 12	5,000+ problem-solve records, mock test percentile history, college shortlist AI tuned to this child, counselor notes	Very High
Year 15	Complete 15-year journey, outcome documented, college admission data	Virtually Impossible

Why incumbents cannot build backward: A well-funded competitor launching today faces a structural problem that no amount of capital solves — they cannot acquire historical data. They can build a better app. They can hire a better AI team. They can outspend on marketing. But they cannot give a parent 7 years of their child's learning history on the day of signup. That data only exists if the family was on the platform 7 years ago.

NEP 2020 Structural Tailwind: India's National Education Policy 2020 mandates foundational literacy and numeracy tracking from age 3. Master-Kids' Stage 1 product is a direct, purpose-built implementation of this mandate — positioning the platform for government ECCE contracts that no pure-play K-12 EdTech company can capture.

SECTION 7

Revenue Model: 10 Streams Across 15 Years

Revenue Stream	Active Stages	Mechanism	Margin
Subscriptions (Advanced + Pro)	1–5	₹149–₹299/month per family	~80%
Toy and learning material commissions	1	Affiliate placement for age-appropriate products	~25–30%
Child education insurance referrals	1	Insurance companies pay to reach parents of under-5 children	~40–50%
Government ECCE contracts	1–2	State education departments, NEP-compliant milestone tracking	~70%
Publisher content partnerships	2–4	Pearson, Oxford, S. Chand — curated content placement at right grade/subject	~75%
Coaching institute pipeline fees	3–4	FIITJEE, Aakash, Allen — warm, data-qualified leads from Class 8–9 students	~90%
Scholarship discovery platform	3–5	Scholarship providers pay to reach merit students	~85%
Career counseling marketplace	4–6	20–25% commission on paid counselor and mentor sessions	~80%
College admission consulting	5	Managed packages for Class 12 students (₹25,000–₹75,000)	~70%
University placement partnerships	5–6	Universities pay for access to pre-qualified, data-verified applicant pool	~90%

Revenue Projections

Revenue Stream	Year 1	Year 2	Year 3	Year 5
Subscriptions	₹30L	₹80L	₹2Cr	₹5Cr
Toy/learning material commissions	₹5L	₹20L	₹60L	₹2Cr
Insurance referrals	₹10L	₹40L	₹1.5Cr	₹6Cr
Government ECCE contracts	—	₹1Cr	₹9Cr	₹50Cr
Publisher partnerships	₹20L	₹48L	₹2–3Cr	₹10Cr
Coaching institute pipeline	₹30L	₹1.5Cr	₹10Cr	₹40Cr
Scholarship discovery	—	₹80L	₹8Cr	₹20Cr
Career counseling marketplace	₹30L	₹2.4Cr	₹15Cr	₹40Cr
College admission consulting	—	₹50L	₹15Cr	₹50Cr
University partnerships	—	₹50L	₹3–4Cr	₹20Cr
Hardware (Phase 4)	—	₹50L	₹2Cr	₹12Cr
Total (estimated)	~₹1.3Cr	~₹9Cr	~₹70Cr	~₹255Cr

Unit Economics

Metric	Month 12 Target	Full 15-Year Lifecycle
CAC (blended)	₹500–₹800	₹500–₹800 (one-time)
Monthly churn	<5%	Decreasing every year
LTV (24-month, subscriptions only)	₹3,576	—
LTV (15-year, all revenue streams)	—	₹50,000–₹90,000+
LTV:CAC (24-month)	6:1	—
LTV:CAC (15-year)	—	65:1 to 180:1
Payback period	~4 months	—

SECTION 8

Technical Architecture

Layer	Technology
Mobile App	React Native + Expo (managed workflow), Expo Router, NativeWind, Expo EAS Build + Update
Web App	React 19 + Vite, Tailwind CSS + Framer Motion, Zustand state management
Backend API	Node.js + TypeScript + Hono.js on AWS Lambda, API Gateway, AWS SQS FIFO, ap-south-1 (Mumbai)
Database	PostgreSQL via Supabase (Row Level Security), Supabase Auth (OTP + Google OAuth)
Cache	Upstash Redis (serverless)
Storage	AWS S3 + CloudFront (audio files, CDN)
Vector DB	Pinecone (Educational DNA embeddings, RAG pipeline, college matching)
STT	OpenAI Whisper API (English + Hindi)
AI — Log Structuring	Claude Haiku (high volume, cost-optimised)
AI — Parent Summaries	Claude Sonnet (quality parent summaries, goal-context aware)
AI — Answer Sheet Check	GPT-4o-mini Vision (image/PDF grading with specific improvement tips)
Payments	Razorpay (UPI + cards, India-first)
Push Notifications	Expo Notifications → FCM (Android) + APNs (iOS)
Analytics	PostHog (self-hostable, privacy-first)
Error Tracking	Sentry
CI/CD	GitHub Actions, Expo EAS Build

The Core AI Pipeline

Child speaks (up to 60 seconds)

- Audio uploaded to AWS S3
- SQS FIFO message queued
- Lambda consumer triggered
 - OpenAI Whisper API (audio → transcript, Hindi + English)
 - Claude Haiku (transcript → structured JSON log)
 - Log saved to PostgreSQL
 - Educational DNA profile updated
 - Claude Sonnet (logs + profile + goal → parent summary)
 - Push notification sent to parent

End-to-end latency target: under 90 seconds from voice to notification.

Security and Compliance

Supabase Row Level Security: Parents read only their own children's data. Tutors read only sessions they created.

DPDP Compliance (India Digital Personal Data Protection Act, 2023): Data localisation in ap-south-1. Consent management in onboarding. Right to erasure implemented. Anonymisation pipeline verified before any data partnership use.

COPPA Guidelines: No advertising to children. No third-party data sharing for individual child profiles. Parental consent gate for all child accounts.

SECTION 9

Funding Ask

Raising: ₹2–3 crore (\$250,000–\$350,000) | Seed Round

Target close: Q3 2026. Structure: SAFE note or equity at a pre-money valuation of ₹12–15 crore.

Use of Funds

Category	Allocation	Details
Engineering	40%	3 full-stack/mobile engineers for 12 months — Stage 1 early childhood module, goal journey map, chapter-level tracking, coaching SaaS integration
Institutional Sales and Marketing	25%	Coaching institute pilots, pre-school outreach, government pilot BD, influencer partnerships, referral programme
AI Infrastructure	20%	Whisper, Claude, Pinecone, Braintrust evals, S3/CloudFront, data warehouse setup
Operations and Legal	10%	DPDP compliance, data partnership legal framework, entity setup, Razorpay integration
Hardware R&D	5%	Phase 4 BLE desk device — initial prototype and manufacturer sourcing

Key Milestones (12 Months Post-Seed)

Milestone	Target Date	Success Metric
5-city pilot launch	Month 3	500 families per city
Goal Journey Map released	Month 3	JEE, NEET, and CUET journey maps live
Stage 1 (Early Childhood) module released	Month 4	500 pre-school families enrolled
First coaching institute SaaS contract	Month 4	1 institute, 500+ students
1,000 active families	Month 6	Goal set for >80% of families
5,000 active families	Month 12	Goal journey map active for >80%
NEP 2020 ECCE pilot MOU	Month 10	1 state government MOU signed
Series A readiness	Month 14	₹5+ crore ARR run rate, 3+ institutional contracts live

Current Traction

Metric	Status
Beta families	50+ active families (Bangalore + Delhi)
Log frequency	40% of beta users log 3+ times per week
Parent summary open rate	>50% (push notification open rate)
Net Promoter Score	+62
Tech status	Live demo — web app + mobile app (React Native)
AI pipeline	Operational — Whisper + Claude Haiku + Claude Sonnet
Smart Learning Plan	In development — CBSE/ICSE prototype complete

SECTION 10

The Long-Term Picture

The 36-Month Roadmap

Phase	Timeline	Core Addition	Primary Revenue Driver
Phase 1 — Daily Engine	Now	Voice/tap log, AI summary, goal map, gamification	Coaching SaaS pilots, subscriptions
Phase 1.5 — Ambient + Early Childhood	Month 2–5	WhatsApp voice, Alexa Skill, Stage 1 milestone module	Publisher partnerships, insurance referrals, ECCE pilot
Phase 2 — Tutor + Social Layer	Month 4–6	Tutor marketplace, social community, scholarship marketplace	Coaching institute pipeline, career counseling
Phase 3 — Intelligence Layer	Month 6–9	Chapter tracking, rank estimator, mock test scheduler, data warehouse	Data marketplace, college consulting pipeline
Phase 4 — Hardware Layer	Month 9–15	BLE desk device, LED streak ring, one-button log	Hardware sales, CSR sponsorships
Phase 5 — Institutional + Government	Month 12+	Government licensing, university pipeline, coaching SaaS national scale	Government contracts, university placement fees

India-First, Then the World

India's JEE/NEET system is the world's most competitive entrance examination ecosystem. A platform built to navigate it will, by construction, be the most capable educational journey platform ever built. Once validated at scale in India, the same architecture applies directly to the UK (A-Levels to Oxbridge), the US (SAT/ACT to Ivy League), the Middle East (Indian diaspora, CBSE curriculum), and Southeast Asia.

India is not just a market to start in. It is the hardest possible proving ground. Winning here means the international expansion is an execution exercise, not a product problem.

What Success Looks Like in 2041

Aarav opens his IIT Bombay admission letter. His mother Priya opens the Master-Kids app one last time and sees the "Journey Complete" card — 15 years of logs, 4,300+ days tracked, 12 tutors, 6 stages, 1 goal achieved.

She screenshots it and posts it to her parent WhatsApp group. Seven families sign up that evening.

Aarav's sister Ananya, now 7 years old, is on a 23-day streak. She is a Learner. She is on her way.

One Student. One Platform. 15 Years. This is Master-Kids.
