

PRD: Project "Master-Kids" (Working Title)

1. Core Product Philosophy

Core Problem

Parents are not lacking tools—they are lacking:

- Time
- Consistency
- Visibility

The real problem is:

“Tracking a child’s daily progress requires too much effort.”

Core Solution

Build a Daily Progress Loop powered by:

- Low-friction input (voice / tap / ambient devices)
- Auto-structured output (AI summaries)
- Reward-driven engagement (kids + tutors)

2. User Personas

1. The Parent (“Observer → Strategist”)

- Wants visibility, not data entry
- Needs quick daily understanding
- Values long-term improvement

2. The Child (“Doer → Achiever”)

- Low patience for friction
- Responds to rewards & feedback
- Needs simplicity (≤ 10 sec actions)

3. The Tutor (“Executor → Discoverable Expert”)

- Avoids admin work
- Wants visibility & credibility
- Incentivized by leads & profile growth

3. Core Product Loop (MOST IMPORTANT)

Daily Loop:

1. Input (Kid / Tutor)

- Voice / tap / quick log

2. Processing (AI Layer)

- Converts to structured tasks
- Updates progress

3. Output

- Parent summary
- Rewards (points, streaks)

- Tutor profile update

Success depends on:

Loop completion frequency (daily/weekly)

4. Product Architecture

Layer 1: Input Layer (Differentiator)

A. App-based input

- Voice logging (primary)
- Tap-based logging
- Photo → task extraction (later)

B. Ambient Input (Phase 1.5)

- Alexa / Google Assistant / Gemini
- Tablet “Kid Mode”

Goal: No need to open app

C. Future: Hardware Input Layer (Phase 4)

- Dedicated desk device
- One-button + voice
- Visual feedback (streak, points)

Hardware = habit anchor, not starting point

Layer 2: Intelligence Layer

- AI transcription (voice → text)
- Task structuring
- Weekly insights
- (Later) recommendation engine

Layer 3: Output Layer

- Parent dashboard
- Child reward system
- Tutor profile system

5. Phase-wise Product Roadmap

Phase 1: Daily Engine (0–2 months)

Goal: Build daily usage habit

Features:

- Voice-based homework logging
- “What I learned today” (1-tap / voice)
- Parent daily summary (auto-generated)
- Basic reward system:
 - Points
 - Streaks

Success Metrics:

- $\geq 40\%$ users log 3x/week
- Parent open rate $\geq 50\%$

Phase 1.5: Ambient Layer (2–4 months)**Goal: Reduce friction further****Features:**

- Alexa / Gemini integration
- WhatsApp voice logging (optional)
- Tablet kid-mode interface

Hypothesis: Usage increases when input $\neq$ app-dependent

Phase 2: Tutor Layer (4–6 months)**Goal: Create supply-side ecosystem****Features:**

- Voice-based tutor updates
- Auto-generated:
 - Lessons taught
 - Homework
 - Parent notes

Tutor Incentives:

- Profile creation
- Activity score
- Ratings
- Discovery visibility

Phase 3: Intelligence Layer (6–9 months)**Goal: Drive monetization via insights****Features:**

- Weekly progress report
- Consistency score
- Skill exposure insights

Example Output:

- “Math engagement dropped 25% this week”
- “Strong consistency in music practice”

Phase 4: Hardware Layer (9–15 months)**Pre-condition: Strong daily usage (habit formed)****Device Concept:**

- Desk-based companion device
- One-button + voice input

- LED / simple display feedback

Value:

- Habit reinforcement
- Child ownership
- Passive reminders

Business Model:

- ₹1,999–₹2,999 device
- Bundled subscription

Phase 5: Marketplace (12+ months)**Goal: Monetization at scale****Features:**

- AI-based tutor recommendations
- Based on:
 - Child activity
 - Tutor engagement data

Revenue Streams:

- Lead generation fees
- Featured tutor listings
- Affiliate partnerships

6. Gamification System**Kids:**

- XP points
- Streaks
- Levels (Explorer → Champion)

Tutors:

- Activity score
- “Top Coach” badge
- Ranking boost

Parents:

- Weekly progress satisfaction
- Child consistency score

7. Monetization Strategy**Phase 1–2: Free (habit building)****Phase 3:**

Premium ₹149–₹299/month

- Advanced insights
- Multi-child tracking

- Priority AI features

Phase 4: Hardware sales

Phase 5: Marketplace revenue

8. Key Risks & Mitigations

Risk 1: Logging fatigue

Mitigation:

- Voice-first
- Ambient input

Risk 2: Tutor adoption

Mitigation:

- Incentivized profiles
- Lead generation

Risk 3: Low perceived value early

Mitigation:

- Strong weekly insights
- Immediate rewards

Risk 4: Hardware distraction

Mitigation: Introduce ONLY after habit validation

9. Success Metrics

Engagement: Daily/weekly logging frequency

Retention: 4-week retention rate

Monetization: Free → paid conversion

Supply: Active tutors onboarded

10. Final Strategic Insight

Real product is NOT:

- A planner
- A learning app
- A hardware device

It is:

A habit-forming system for tracking child progress with near-zero effort

One-line Product Clarity

👉 *“Kids log their day in 10 seconds. Parents instantly know if they’re improving.”*
