About Master-Kids

Master-Kids is India's cradle-to-career learning platform — one platform that grows with a child from Pre-Nursery all the way to college, turning everyday effort into visible progress for parents and a rewarding game of streaks, XP and badges for children. This Olympiad practice series is part of the Master-Kids Primary School programme (Stage 2, Class 1-5). It is board-agnostic — suited to CBSE, ICSE and State Board children alike — and aligned with the NEP 2020 focus on foundational numeracy, science thinking and language.

About This Worksheet

Worksheet 35 turns the child into a smart shopper: multi-item bills, price per unit (and the pack-vs-single savings comparison), first profit and loss, discounts, taxi fare with two rates, and weekly savings over time. Every situation is real Indian shopping — rupees, dozens, ₹500 notes — exactly as the IMO's Everyday Mathematics frames money at this level.

Learning Objectives

- Total multi-item bills and calculate change from large notes.
- Find unit prices and scale them (3 cost ₹81 → 7 cost?).
- Compute simple profit and loss including extra costs.
- Compare pack prices vs single prices to find savings.
- Handle two-rate problems (taxi fare) and coin combinations.
