About Master-Kids

Master-Kids is India's cradle-to-career learning platform — one platform that grows with a child from Pre-Nursery all the way to college, turning everyday effort into visible progress for parents and a rewarding game of streaks, XP and badges for children. This Olympiad practice series is part of the Master-Kids Primary School programme (Stage 2, Class 1-5). It is board-agnostic — suited to CBSE, ICSE and State Board children alike — and aligned with the NEP 2020 focus on foundational numeracy, science thinking and language.

About This Worksheet

Worksheet 40 closes Level 2 with its hardest mix: reverse division (quotient & remainder given), '3/4 of a number is 36', the gates-on-a-loop counting trap, buy-5-get-1-free logic, and the lift-trips remainder problem — all genuine pre-Advanced thinking. A child scoring 16+ here is ready for Level 3.

Learning Objectives

- Reverse-engineer numbers from division facts and fraction facts.
- Handle loop-counting (gates) vs line-counting (+1) correctly.
- Apply buy-and-get-free and round-up (lift trips) logic.
- Combine speed, time and distance over clock intervals.
- Confirm readiness for Level 3 (Advanced).

Instructions

1. This worksheet has 20 multiple-choice questions. Each question has exactly one correct answer.
2. Read every question carefully. Look at any picture, table or figure before choosing.
3. Each correct answer earns +1 mark. There is no negative marking, so attempt every question.
4. Write your chosen option — (A), (B), (C) or (D) — clearly in the answer box or on a separate sheet.
5. Do all rough work in the margin or on rough paper. Do not use a calculator.
6. After finishing, check your answers against the Answer Key, then read the Detailed Solutions to understand the reasoning behind every question — that is where the real learning happens.

Marking scheme: +1 mark for each correct answer · No negative marking · Maximum 20 marks.

Step-by-Step Solutions
Q1. Correct answer: (A)

Smallest non-zero first (1), then 0, then the rest ascending (3, 6, 8): **10,368**.

Q2. Correct answer: (A)

$47 \times 20 = 940$; minus 47 $\rightarrow 940 - 47 = \mathbf{893}$.

Q3. Correct answer: (B)

Number = $8 \times 14 + 6 = 112 + 6 = \mathbf{118}$.

Q4. Correct answer: (A)

$3\frac{1}{5} = \frac{16}{5}$ and $1\frac{1}{5} = \frac{7}{5}$. $\frac{16}{5} - \frac{7}{5} = \frac{9}{5} = \mathbf{1 \text{ and } 4/5}$.

Q5. Correct answer: (A)

$1,260 \div 7 = 180 \text{ cm} = \mathbf{1 \text{ m } 80 \text{ cm}}$.

Q6. Correct answer: (B)

$7:45 + 2 \text{ h} = 9:45$; $+ 35 \text{ min} = \mathbf{10:20 \text{ a.m.}}$

Q7. Correct answer: (C)

Selling price = cost + profit = $1,250 + 375 = \mathbf{\text{₹}1,625}$.

Q8. Correct answer: (A)

Length + width = 25, so width = 10. Area = $15 \times 10 = \mathbf{150 \text{ sq cm}}$.

Q9. Correct answer: (B)

Each term is doubled plus 1: $2 \rightarrow 5$ ($4+1$), $5 \rightarrow 11$ ($10+1$), $11 \rightarrow 23$, $23 \rightarrow 47$, so $47 \times 2 + 1 = \mathbf{95}$.

Q10. Correct answer: (B)

The values run backwards, so Z (the last letter) = **1**.

Q11. Correct answer: (B)

If 3 quarters = 36, one quarter = 12, so the number = $4 \times 12 = \mathbf{48}$.

Q12. Correct answer: (B)

8 to 11 = 3 hours. Distance = $3 \times 65 = \mathbf{195 \text{ km}}$.

Q13. Correct answer: (B)

Week 1 = 45; double = 90 = **Week 3**.

Q14. Correct answer: (C)

$45 + 60 + 90 + 75 = \mathbf{270}$.

Q15. Correct answer: (C)

Perimeter = 240 m. Gates every 30 m around a CLOSED loop: $240 \div 30 = \mathbf{8 \text{ gates}}$ (on a loop, no extra +1 — the start point is reused).

**Q16. Correct answer: (A)**

Denominator 24: $\frac{5}{8} = \frac{15}{24}$ and $\frac{7}{12} = \frac{14}{24}$. **$\frac{5}{8}$** is greater.

Q17. Correct answer: (A)

Used = $6 \times 350 = 2,100$ g. Left = $2,400 - 2,100 =$ **300 g**.

Q18. Correct answer: (B)

$4 \times 9 = 36$; $+ 2 =$ **38 years**.

Q19. Correct answer: (C)

Buying 15 gives $15 + 3$ free = 18 ✓. (Every 5 bought → 1 free, so 15 bought → 3 free.) She must buy **15**.

Q20. Correct answer: (B)

$50 \div 8 = 6$ remainder 2 — six full trips carry 48, and ONE more trip takes the last 2. Total **7 trips**.
